# 1 Application Changes

## 1.1 General Changes

### Errors fixed

#### A1) Problem If Document Types Are Longer Than 30 Characters

##### Error

If the document type is longer than 30 characters the system would come with an error message when trying to use the Navigate.

##### This has been corrected

Form 344 Navigate

#### A2) Missing Multi Language Captions

##### Error

Multi language captions were missing.

##### This has been corrected

Form 8605 Mapping field list  
Form 8604 Mapping Object List  
Form 6863 EP Language List  
Form 6862 EP Field List  
Form 7702 Fields  
Form 5134 Contact Duplicates  
Report 5183 Resend Attachments

#### A3) Text Fields Are Too Short For Multi Language

##### Error

Some text fields were too short to meet multi language requirements.

##### This has been corrected

Report 33 Reconcile Cust. and Vend. Accs  
Form 8607 Implementation Status

**A4) Text Constant Text004 (Q1001) - Message Makes Pluralism With %1s**

**Error**

The use of a singular form on table captions cannot be easily transformed into other languages. The text constant was therefore changed to 'Dimensions'.

**This has been corrected**

Form 600 IC Dimensions

**A5) Navigation Pane Expands To Full Size And Can Not Be Resized**

**Error**

Sometimes when a computer is locked or goes into screensaver mode with Navision open, the Navigation Pane would come up in Full Screen and could not be resized.

**This has been corrected**

**A6) Run Object On Smart Tag Data Tool Set To Non-Existent Object**

**Error**

The RunObject property on the Start button of the Smart Tag Data Tool window was set to a nonexistent object - Codeunit 101900.

**This has been corrected**

Form 7950 Smart Tag Data Tool

VSA reference: 8189375

**A7) Navigation Pane Links Wrong**

**Error**

"Warehouse | Planning & Execution | Bin Contents" and "Warehouse | Goods Handling Multiple Orders | Bin Contents" did not link to the same form.

**This has been corrected**

MenuSuite 10 MBS

Form 7374 Bin Contents

**A8) Hotkeys Not Working**

**Error**

Hot keys for active menu changing did not work.

**This has been corrected**

VSA reference: 8182988

## 1.2 General Ledger

### Features

#### A9) Missing Warning When Sending/Receiving The Same Document Multiple Times

##### Feature

It was possible to send and receive the same document multiple times without warning.

A warning has been added for the user to accept or decline multiple transactions of the same document.

##### This feature has been implemented

Form 611 IC Outbox Transactions  
Form 615 IC Inbox Transactions  
Table 414 IC Outbox Transaction  
Table 418 IC Inbox Transaction

VSA reference: 8183849

#### A10) VAT-Fields In General Ledger Not Filled In

##### Feature

When selling a fixed asset using the Net Disposal Method then the VAT-fields in the General Ledger Entries Window was not filled in.

New fields:

TAB5611 Depreciation Book, field no. 46: "VAT on Net Disposal Entries", Boolean field.  
TAB5637 FA G/L Posting Buffer field no. 16: "Net Disposal", Boolean field

##### This feature has been implemented

TAB5611 Depreciation Book  
TAB5637 FA G/L Posting Buffer  
COD12 Gen. Jnl.-Post Line  
COD5600 FA Insert Ledger Entry  
COD5601 FA Insert G/L Account  
COD5632 FA Jnl.-Post Line

VSA reference: 7907571

#### A11) Print VAT Spec In Local Currency

##### Feature

A new VAT Specification in LCY has been added to all reports which already had VAT Specification.

### **This feature has been implemented**

Form 118 General Ledger Setup  
Report 117 Reminder  
Report 118 Finance Charge Memo  
Report 122 Reminder - Test  
Report 123 Finance Charge Memo - Test  
Report 202 Sales Document - Test  
Report 204 Sales - Quote  
Report 205 Order Confirmation  
Report 206 Sales - Invoice  
Report 207 Sales - Credit Memo  
Report 210 Blanket Sales Order  
Report 402 Purchase Document - Test  
Report 405 Order  
Report 406 Purchase - Invoice  
Report 407 Purchase - Credit Memo  
Report 6631 Return Order Confirmation  
Report 6641 Return Order  
Table 98 General Ledger Setup

### **Errors fixed**

#### **A12) Report 7 Does Not Show New Accounts**

##### **Error**

The date filter specified on the request form was overwritten in the code. Therefore some records were unintentionally being filtered out.

##### **This has been corrected**

Report 7 Trial Balance/Previous Year

VSA reference: 8113279

#### **A13) T & W Not Interpreted As Today And Work Date In Report 25**

##### **Error**

T & W were not interpreted as "Today" and "Work Date" in Report 25 field Date Filter on request form.

##### **This has been corrected**

Report 25 Account Schedule

VSA reference: 8157187

**A14) Balance Account Name Not Correct On Journals**

**Error**

When changing from a journal batch with a default bal. acc. no. to another template with a batch without a default bal. acc. no, the bal. acc. name in the bottom of the form was not cleared, but contained the bal. account name from the previous batch.

**This has been corrected**

Form 39 General Journal  
Form 253 Sales Journal  
Form 254 Purchase Journal  
Form 255 Cash Receipt Journal  
Form 256 Payment Journal

VSA reference: 8176462

**A15) Not All Columns Are Refreshed**

**Error**

The 12x1 Bar Chart Subform did not refresh all columns.

**This has been corrected**

Form 630 Bar Chart 12x1 Subform

VSA reference: 8183916

**A16) Consolidation Error When Changing Currency**

**Error**

It was not possible to change the Relational Exchange Rate Amount on form 511 Change Exchange Rate under the menu Exch. Rate, Last Balance Sheet, it was kept as the last exchange rate used. This created an error if the currency changed from one consolidation to the next, and the last consolidation was run twice. The field has therefore been made editable.

**This has been corrected**

Form 240 Business Units

**A17) Error When Updating The Analysis View**

**Error**

An error would occur when trying to update the analysis view when having many lines in the entry (more than 216799 lines).

**This has been corrected**

Codeunit 410 Update Analysis View

VSA reference: 8152115

**A18) Totaling Not Correct In Report 7151**

**Error**

The report didn't use all filters for totaling.

**This has been corrected**

Report 7151 Item Dimensions – Total

VSA reference: 8224065

**A19) Missing Permissions In Report 83**

**Error**

Permissions for tables 5930 - Posted Service Header and 5932 - Posted Service Invoice Line tables was missing.

**This has been corrected**

Report 83 Change Global Dimensions

VSA reference: 8223420

**A20) Wrong Format Of Dimensions In Budget Export To Excel**

**Error**

Exporting budgets to Excel would result in non-formatted fields for dimension values if they were blank. In cases where the dimension value was a number this would generate an error during import.

**This has been corrected**

Report 82 Export Budget to Excel

VSA Reference: 8291613

**A21) Wrong Rounding When Printing Acc. Schedule**

**Error**

When acc. schedules were printed and the setup was rounded to either nearest thousands or millions the figures were shown with decimals.

**This has been corrected**

Codeunit 8 AccSchedManagement

## Issues

### **A22) Inter Company Error Message Changed**

#### **Issue**

When an inter company partner e.g. A tried to complete (send) an inter company line to a partner e.g. B that did not have the sending partner A set up as either an IC vendor/customer, an error message came up saying that "IC Partner A does not exist as a Vendor in current company." This was misleading since "current company" referred to the company/partner the line was sent to and not the sending company. The message has therefore been changed to "IC Partner A does not exist as a Vendor in IC Partner B."

#### **This has been changed**

Codeunit 427 ICInboxOutboxMgt

### **A23) Default Dimension Names Not Validated**

#### **Error**

When creating default data in "Codeunit 700 BA Overview Form Mgt.", the function UpdateDimName did not validate the dimension name in the line:  
BADim.Name := BADim.Name + ' ' + BADimRel."Relates-to Table Name".

#### **This has been corrected**

Codeunit 700 BA Overview Form Mgt.

### **A24) Business Unit Filter For G/L Account On Consolidated Report**

#### **Error**

If there were more than 4 business units within a company the report would give an error despite of what the user chose in business unit filter on the G/L Account.

#### **This has been corrected**

Report 18 Consolidated Trial Balance (4)

VSA reference: 8318743

### **A25) Default Name For Measures And Check On Cube Dimensions**

#### **Error**

In Business Analytics the default name for measures was not the same when fields were chosen from "Select Fields" or manually typed.  
There was no check for a Cube dimension name being used more than once.

#### **This has been corrected**

Codeunit 702 BA Db. Definition Create XML

**A26) Missing Ellipsis(...) On BA Db. Cube Dimensions**

**Error**

The Ellipsis (...) was missing after Select Dimensions and Select Fields on form 714 BA Db. Cube Dimensions.

**This has been corrected**

Form 714 BA Db. Cube Dimensions

**A27) Wrong Calculation Format**

**Error**

There was a wrong calculation format in a text string for Report 37 Balance Comp. - Prev. Year.

**This has been corrected**

Report 37 Balance Comp. - Prev. Year

**A28) "None" Is A Hard Coded String**

**Error**

"None" was hard coded.

**This has been corrected**

Report 36 Fiscal Year Balance  
Report 37 Balance Comp. - Prev. Year  
Report 38 Trial Balance by Period

**A29) Missing Confirmation Message**

**Error**

Confirmation message was missing when updating the Allow VAT Difference.

**This has been corrected**

Table 80 Gen. Journal Template

**A30) Look-up To IC Dimensions Not Correct**

**Error**

The look-up to the field Map-to IC Dimension Value in the Dimension Value table did not work when there was nothing entered in the Map-to IC Dimension field in the Dimension table for that Dimension. However, the field was filled out for another Dimension.

**This has been corrected**

Table 348 Dimension

VSA reference: 8243548

**A31) Analysis View Form Updated When Not Necessary**

**Error**

The form was updated if the user made a lookup in the Analysis View Code field and pressed escape - the filters just entered were lost.

**This has been corrected**

Form 554 Analysis by Dimensions

VSA reference: 8242999

**A32) IC Partner Ref. Field Not Filled Out Properly On Documents**

**Error**

When filling out an IC document line with a GL Account, the IC Partner Reference was not filled out. Now it is filled out with the value from the Default IC Partner G/L Acc. No field on the GL Account table.

**This has been corrected**

Table 37 Sales Lines  
Table 39 Purchase Lines

VSA reference: 8242513

**A33) Analysis View Budget Entries Was Not Deleted With Budget**

**Error**

When deleting a budget the connected Analysis View Budget Entries were not deleted.

**This has been corrected**

Table 95 G/L Budget Name

VSA reference: 8258799

**A34) Wrong Posting Date When Using UN Apply.**

**Error**

When UN applying a customer or vendor ledger entry, the detailed customer/vendor ledger entry received the posting date of the original application, instead of the posting date entered on the unapplied form.

**This has been corrected**

Codeunit 12 Gen. Jnl.-Post Line  
Codeunit 226 CustEntry-Apply Posted Entries

**A35) Updating Of Fields In Batch Post Journal Lines**

**Error**

In some cases where several lines had to be updated with Bill-to/Sell-to and Ship-to/Order Address Code only the first line was updated.

**This has been corrected**

Codeunit 13 Gen. Jnl.-Post Batch

VSA reference: 7728479

**A36) Close Income Statement Performance Optimizing**

**Error**

Close Income statement was slow when closing a fiscal year with more than the global dimensions. The way the report added the G/L postings up with the same combination of Dimensions, has been optimized, reducing runtime mainly on large databases which closes the income statement with more than the global dimensions.

**This has been corrected**

Codeunit 411 Dimension Buffer Management  
Report 94 Close Income Statement  
Table 353 Dimension ID Buffer

VSA reference: 8112024

**A37) Currency Posting Triggered Additional Currency Amount**

**Error**

When posting foreign currencies, additional credit or debit amount could be filled in on the general ledger entry – even when no additional currency was chosen.

**This has been corrected**

Codeunit 12 Gen. Jnl.-Post Line

VSA reference: 8264434

**A38) Wrong Parameter Size In Report 96**

**Error**

In the function Initialize in report 96 the parameter FromGIAccount2 was a Code 20. This parameter was used for filtering on General Ledger account and has therefore been changed to Code 250.

**This has been corrected**

Report 96 Copy G/L Budget

**A39) XBRL has been updated to comply with XBRL specification 2.1**

**Issue**

The XBRL functionality has been updated to comply with XBRL specification 2.1.

**This has been updated**

Codeunit 422 XBRL Import Taxonomy Spec. 2  
Report 505 XBRL Export Instance - Spec. 2  
Table 395 XBRL Taxonomy Line

**A40) G/L Account Entry Was Processed if Consol. Acc. Fields Empty**

**Error**

When the user executed the Consolidation - Test Database report while the Consol. Credit Acc. and Consol. Debit Acc. fields on the G/L Account table were empty, the program attempted to obtain a consolidated account.

**This has been corrected**

Report 14 Consolidation - Test Database

**A41) Entry No. In General Ledger Entries Skipped When Applying**

**Error**

When two entries were applied, the entry no. on the application in the GL Entries skipped/jumped one number.

**This has been corrected**

Codeunit 12 Gen. Jnl.-Post Line

VSA reference: 8185240

**A42) Payment Method Not Included In The Where Used List**

**Error**

The Payment Method table was not included in the Where Used list.

**This has been corrected**

Codeunit 100 Calc. G/L Acc. Where-Used

VSA reference: 8202425

**A43) Global Dimensions Not Transferred With Inter Company**

**Error**

When doing inter company transactions, the global dimension on journal lines and on document headers were not filled out, but only appeared in the dimension tables.

**This has been corrected**

Codeunit 408 DimensionManagement  
Codeunit 427 ICInboxOutboxMgt

**A44) Reversal Transaction Functionality Not Working**

**Error**

If the reversal entries only included one transaction number the filter for G/L and VAT entries were extended to include transaction no. = 0.

**This has been corrected**

Codeunit 12 Gen. Jnl.-Post Line

VSA reference: 8170123

**A45) Error Message When Filling Field City**

**Error**

It was possible to enter 50 characters in the field City in the Company Information table, but an error message appeared. In the rest of the application the field City can only contain 30 characters, so the field City on the Company Information table has now been reduced to 30 characters.

**This has been corrected**

Table 79 Company Information

**A46) Report Change Global Dimensions Failed**

**Error**

An error was generated in report Change Global Dimensions when this report was run on localized versions of Navision. Translated captions of the tables could exceed the maximum length defined for the table names. The problem could prevent the report from working correctly on the localized versions of Navision.

**This has been corrected**

Report 83 Change Global Dimensions

VSA reference: 8256494 & 8257536

**A47) No Dimension Combination Displayed For Renamed Dimension**

**Error**

When creating two dimensions and defining the dimension combination for these dimensions as Blocked, and then subsequently renaming one of the dimensions, no value for either dimensions was displayed on the Dimension Combinations window.

**This has been corrected**

Form 538 Dimension Combinations  
Form 539 Dimension Value Combinations

VSA reference: 8256494 & 8257536

**A48) Not Possible To Copy All Tables In Setup Checklist Window**

**Error**

It was not possible to copy the company specific tables. Now all tables can be copied.

**This has been corrected**

Codeunit 406 Setup Checklist Management

VSA reference: 8259950

**A49) Unrealized VAT Not Cleared**

**Error**

Unrealized VAT account was not cleared when applying a posted invoice against a posted payment. However, it was cleared when the posted payment was applied against the posted invoice.

**This has been corrected**

Codeunit 12 Gen. Jnl.-Post Line

VSA reference: 8214784

**A50) Amounts Not Visible In Report 28**

**Error**

Dimension Detail Report did not show the amounts posted to the Beginning total Dimension Value.

**This has been corrected**

Report 28 Dimensions – Detail

VSA reference: 8277785

## 1.3 Fixed Assets

### Features

#### A51) Wrong Calculation Of Depreciation

##### Feature

The fixed asset card has 2 new fields:

Temp. Ending Date  
Temp. Fixed Depr. Amount

If these 2 fields are filled in then batch 'Calculate Depreciation' depreciates the fixed asset with 'Temp. Fixed Depr. Amount' yearly until 'Temp. Ending Date'. The Temporary Depreciation Method can be used together with the other depreciation methods, except 'User Defined' after 'Temp. Ending Date' the fixed asset is depreciated with the method specified in field 'Depreciation Method'.

The FA Reclass. Journal has 1 new field:

Calc. DB1-Depr. Amount

If a check mark is entered in this field then the reclass. function fills in the fields 'Temp. Ending Date' and 'Temp. Fixed Depr. Amount' in such a way that total depreciation of 'FA No.' and 'New FA No.' does not change in the current fiscal year, if the 2 fixed assets have been depreciated until (and with) 'FA Posting Date' of the reclass. journal. Depreciation method had to be 'Declining-Balance-1' or 'DB1/SL'. The calculation formula is specified below.

New fields:

TAB5612 FA Depreciation Book, field 61 Temp. Ending Date, type Date  
TAB5612 FA Depreciation Book, field 62 Temp. Fixed Depr. Amount, type Decimal  
TAB5624 FA Reclass. Journal Line, field 22 Calc. DB1-Depr. Amount, type Boolean

##### This feature has been implemented

REP5607 Fixed Asset - Projected Value  
TAB5612 FA Depreciation Book  
TAB5624 FA Reclass. Journal Line

VSA reference: 8244082

## **A52) New Depreciation Method “Sum Of Digits”**

### **Feature**

In some countries the depreciation method ‘Sum of Digits’ depreciation method is used. In Navision a new function in window ‘Depreciation Table Card’ creates a ‘Sum of Digits’ table.

### **This feature has been implemented**

Form 5649 Insurance - Tot. Value Insured  
Form 5659 Depreciation Table Card  
Report 5683 Create Sum of Digits Table

## **A53) Insurance Total Value Insured**

### **Feature**

On the fixed asset card a new menu-item ‘Insurance – Tot. Value Insured’ has been inserted. The menu-item shows the total value insured for each fixed asset.

New Objects:

TAB5650 Insurance - Tot. Value Insured  
FOR5649 Insurance - Tot. Value Insured  
FOR5650 Ins. Tot. Valued Ins. Subform

### **This feature has been implemented**

FOR5600 Fixed Asset Card  
TAB5650 Insurance - Tot. Value Insured  
FOR5649 Insurance - Tot. Value Insured  
FOR5650 Ins. Tot. Valued Ins. Subform

## **A54) Allow Negative Acquisition Cost**

### **Feature**

In some countries fixed assets are depreciated below zero (Book Value < 0). This depreciation method is often combined with indexation of the acquisition cost. This was not possible in Microsoft Business Solutions–Navision W1 4.0.

If the user enters a check mark in the new field ‘Allow Acq.-Cost below Zero’ in Table Depreciation Book then the user is able to index the acquisition cost.

New fields

TAB5611 Depreciation Book, field 47 ‘Allow Acq.-Cost below Zero’, type Boolean (we already have a field in this table named: ‘Allow Depr. below Zero’)

### **This feature has been implemented**

TAB5611 Depreciation Book  
COD5606 FA Check Consistency

## **Errors fixed**

### **A55) Missing Option String**

#### **Error**

An Option String was missing.

#### **This has been corrected**

Form 5662 FA Posting Types Overview

## **1.4 Sales & Receivables**

## **Errors fixed**

### **A56) Reminders And Due Date On Entries Not Consistent**

#### **Error**

When creating an invoice and issuing a reminder for a customer and afterwards changing the due date of the invoice, the invoice would appear in the next reminder even though the due date was changed.

#### **This has been corrected**

Table 21 Cust. Ledger Entry  
Codeunit 392 Reminder-Make

VSA reference: 8108957

### **A57) Wrong handling of Extended Texts in Copy Document**

#### **Error**

If activating the recalculate lines option the extended text was taken from both the item and the sales lines. Same problem existed on the purchase side.

#### **This has been corrected**

Codeunit 6620 Copy Document Mgt.

VSA reference: 8138661

**A58) Table Locking With Several Users and Dimensions**

**Error**

If two users were working in the same database, and one user changed a dimension on an invoice header without answering the confirm message, the other user would not be able to open the invoice.

**This has been corrected**

Codeunit 408 Dimension Management

VSA reference: 8142346

**A59) All Dimensions On Document Lines Were Checked**

**Error**

When a document was posted, the dimensions on all lines were checked, so if, for example, only one line was invoiced, the dimensions on the other lines were also checked.

**This has been corrected**

Codeunit 80 Sales-Post

Codeunit 90 Purchase-Post

VSA reference: 8146646

**A60) Wrong Card Shown If The No. Field On A Sales Doc. Was Blank**

**Error**

If the No. field on a sales line was blank, and the user clicked the Item Card link in the sales information pane, the wrong item card came up.

**This has been changed**

Codeunit 7171 Sales Info-Pane Management

VSA reference: 8160765

**A61) The Wrong Statistics Window Opened For Credit Memos**

**Error**

Statistics for credit memos opened the sales order statistics instead of the sales statistics. The same happened on the purchase side.

**This has been corrected**

Form 44 Sales Credit Memo

Form 52 Purchase Credit Memo

VSA reference: 8160818

**A62) Balance Field On Apply Entries Forms Not Updated Properly**

**Error**

The field Balance on forms Apply Vendor Entries and Apply Customer Entries was not updated correctly. The field Appln. Rounding Precision on G/L Setup was not taken into account.

**This has been corrected**

Form Apply Vendor Entries  
Form Apply Customer Entries

**A63) Error When Copying Document**

**Error**

The sales line has a function that puts the value of the sales header into a buffer. Unfortunately the buffer was not updated after the "ToSalesHeader" was updated with information from the "FromSalesHeader".

**This has been corrected**

Codeunit 6620 Copy Document Mgt.

VSA reference: 8160823

**A64) Wrong Validation Of Requested Delivery Date**

**Error**

Wrong error message if a sales line had both "Requested Delivery Date" and "Promised Delivery Date" specified when creating a new sales line including the same item no., variant and location combination.

**This has been corrected**

Table 37 Sales Line

VSA reference: 8163452

**A65) Message Missing If A Reminder Terms Code Had No Levels**

**Error**

If a Reminder Terms Code had no levels and you tried to create reminders the system came with an error instead of the information message that appeared in version 2.60.

**This has been corrected**

Codeunit 392 Reminder-Make  
Report 188 Create Reminders  
Report 189 Suggest Reminder Lines

VSA reference: 8171530

**A66) Function Check Availability Does Not Work.**

**Error**

Function Check Availability didn't work if granule Order Promising" wasn't in the license file.

**This has been corrected**

Codeunit 5790 Available to Promise

VSA reference: 8177658

**A67) Wrong Invoice Discount**

**Error**

The invoice discount was not shown correctly in the Sales Quote Statistics if an item used a location that required pick.

**This has not been corrected**

Form 160 Sales Statistics

Form 161 Purchase Statistics

VSA reference: 8184285

**A68) Budget Filter Missing**

**Error**

The Analysis Report did not include the budget filter.

**This has been corrected**

Codeunit 7110 Analysis Report Management

VSA reference: 8196975

**A69) Special Characters Could Not Be Included In Post Code**

**Error**

If you entered special characters like () into the Post Code of the Customer card you would get an error.

**This has been corrected**

Table 225 Post Code

VSA reference: 8198311

#### **A70) Error When Creating A Second Sales Order**

##### **Error**

When creating 2 Sales Orders using the same Customer and using the same Item, with the Requested Delivery Date and the Promised Delivery Date filled in on the header of the 1st Sales Order, you would receive the error "You cannot change the Requested Delivery Date when the Promised Delivery date has been filled in." when the quantity was entered on the second Sales Order.

##### **This has been corrected**

Table 99000880 Order Promising Line

VSA reference: 8169709

#### **A71) Wrong Value Entries When Partially Shipping A Sales Order**

##### **Error**

When partially posting Sales Orders that included Item Charges and Item Tracking, wrong Value Entries would appear.

##### **This has been corrected**

Codeunit 80 Sales-Post  
Codeunit 90 Purch.-Post

VSA reference: 8205158

#### **A72) Lookup On Field IC Partner Reference Did Not Work Correct**

##### **Error**

Lookup on field IC Partner Reference in both the Sales Line table and Purchase Line table did not work correct. When lookup was made the focus was on the wrong record.

##### **This has been corrected**

Table 37 Sales Line  
Table 39 Purchase Line

#### **A161) Outlook Remained In Memory After Synchronization Setup**

##### **Error**

OUTLOOK.EXE process remained in memory when the user specified a folder of incorrect type while setting up the synchronization with Outlook for a salesperson, and then closed Navision.

##### **This has been corrected**

#### **A162) Text Length Inconsistency When Searching Contacts**

##### **Error**

Text string "Text009" can contain 37 characters in the "CodeUnit 5067 ProcessQuery" and field "Contact Name" in "Table Search Result" table may have 30 characters only. This would cause an error when the contact name was longer than 30 characters.

##### **This has been corrected**

Table 5113 Search Result

VSA reference: 8311875 & 8310513

## **1.6 Service Management**

### **Errors fixed**

#### **A163) Error Msg. Unclear When Contract Expires Before Inv. Period**

##### **Error**

The error message, that appeared when the expiration date for a locked contract fell before the next invoice period starting date, has been made more descriptive.

**This has been corrected**

Codeunit 5943 "Lock-OpenServContract"

Navision Service System reference: HQ-731-17-3D5A

**A164) Item Serial No. in Item Tracking Sum. Inherited Incorrectly**

**Error**

When the user created a Service Order for an item from a Sales Order, the Serial No. in the Item Tracking Summary was inherited from the Sales Order but not the Service Order. The Serial No. should have been inherited from both the Sales Order and the Service Order.

**This has been corrected**

Table 5902 Service Invoice Line  
Form 6510 Item Tracking Lines  
Codeunit 6500 Item Tracking Management

Navision Service System reference: DE-428-626-HKZN

**A165) Error When Converting Service Quote with Loaner No. to Order**

**Error**

An error appeared if the user converted a service quote with a Loaner No. assigned to it into a service order, and then tried to receive the corresponding loaner.

**This has been corrected**

Codeunit 5923 Service-Quote to Order

VSA reference: 7849669

**A166) Fault Reason Code Check Box Caused Numerous Errors**

**Error**

In some cases, when a Fault Reason Code with the Exclude Warranty Discount check box selected was assigned to or removed from the Service Invoice Line, the Line Discount Type field was not updated.

When the Fault Reason Code on the Service Item Line was assigned, the linked Service Invoice Line with the type Cost was not updated.

The Service Item Line's Fault Reason Code with the Exclude Warranty Discount check box not selected was not copied to the newly created Service Invoice Line with the type Cost.

**This has been corrected**

VSA reference: 8058910

**A247) Error When Setting Filters On A Transfer Order**

**Error**

The user got an error when setting a filter in the No. field on a Transfer Order for a document no. that did not exist.

**This has been corrected**

Form 5740 Transfer Order

VSA reference: 8005257

**A248) Check Marks Are Reverted**

**Error**

When check marking "Automatic Cost Posting" and "Expected Cost Posting" in "Inventory Set up" check marks were reverted.

**This has been corrected**

Table 313 Inventory Setup  
Codeunit 5810 Change Average Cost Calc. Type

**A249) "No." Parameter Too Short**

**Error**

"No." parameter in Codeunit 5812 - "Calculate Standard Cost", function "InsertInErrBuf" was defined with length 10 instead of length 20.

**This has been corrected**

Codeunit 5812 Calculate Standard Cost

VSA reference: 8162314

**A250) Product Group Code Not Deleted**

**Error**

The "Product Group Code" was not deleted when "Item Group Code" was deleted.

**This has been corrected**

Table 5722 Item Category

VSA reference: 8157848

**A251) Error Message "The indexing 4 in the array is outside of the permitted range"**

**Error**

"Report 7150 Item Dimensions – Detail" would return the error "The indexing 4 in the array is outside of the permitted range" when previewing with 3 dimensions.

**This has been corrected**

Report 7150 Item Dimensions – Detail

VSA reference: 8177663

**A252) Report Quantity Explosion Of BOM Returns Error Message**

**Error**

If a Production BOM was handled instead of an item an unconditional 'Get' would lead to the error "Item ... doesn't exist".

**This has been corrected**

Report 99000753 Quantity Explosion of BOM

VSA reference: 8170070

**A253) Item And BOM Journal Templates Misplaced In Menu**

**Error**

Item Journal Templates and BOM Journal Templates menu items were reachable from Warehouse. The journals have been moved to Administration.

**This has been corrected**

MenuSuite 10

VSA reference: 8189412

**A254) Item Tracking Not Filtering On Bin Code**

**Error**

The error was caused because the remaining quantity was always taken from the Item Ledger Entry. This table does not include Bins so the quantity available per Bin was always displayed wrong.

**This has been corrected**

Codeunit 6500 Item Tracking Management

VSA reference: 8211105

**A255) Wrong Adjust Cost - Item Entries**

**Error**

The cost adjustment tried to adjust the value entry created from the item charge that was assigned to the sales shipment.

**This has been corrected**

Codeunit 5895 Inventory Adjustment

VSA reference: 8164815

**A256) Wrong Calculations With “Item Age Composition – Value”**

**Error**

The unit cost was calculated incorrectly.

**This has been corrected**

Report 5808 Item Age Composition – Value

VSA reference: 8230600

**A257) Inventory Adjust Cost Batch Job Creates Wrong Rounding Entries**

**Error**

Circular references were created between sales orders and sales credit memos.

**This has been corrected**

Codeunit 22 Item Jnl.-Post Line

VSA reference: 8194373

**A258) Transfer Orders And Inventory Picks/Put Away**

**Error**

When trying to create put away from a transfer order you would receive message "There is nothing to create" even when there are items to receive.

**This has been corrected**

Codeunit 5773 Whse.-Transfer Release

VSA reference: 8237614

**A259) BOM Posting Of An Item Set Up With Code Mandatory For The Dimension**

**Error**

When posting BOM Journals for items which had a Dimension Code of Code Mandatory you would get an error: "The Dimension Code must be specified", even when quoting on the BOM Journal line.

**This has been corrected**

Codeunit 32 BOM Jnl.-Post Line

VSA reference: 8206516 & 8218643

## **A260) Discrepancy In Lot Numbers With Bin Content**

### **Error**

Codeunit 7302 WMS Management would prevent a check of serial and lot quantity in a bin when location was a non-directed-put-away-and-pick location and the transaction was a movement.

### **This has been corrected**

Codeunit 7302 WMS Management

VSA reference: 8259393

## **A261) Divide By Zero Error**

### **Error**

You would get a divide by zero error when using Item Charges on a purchase order. The error was caused by the use of the "Qty to invoice" on the distribution of the line discount amount. In some cases it was 0 when the charge assignment had been previously posted. The distribution of the line discount amount is now calculated using the same principles as the inv. discount amount which is based on the proportion with respect to the purchase line quantity.

### **This has been corrected**

Codeunit 90 Purch.-Post

VSA reference: 8249057

## **A262) Wrong Rounding Value Entries When Posting Revaluations**

### **Error**

The first found outbound value entry was posted before revaluation. Revaluation was not included in the outbound cost calculation. The following value entry, which was posted after the revaluation was not regarded anymore.

### **This has been corrected**

Codeunit 5895 Inventory Adjustment

## **A263) Dimensions Deleted**

### **Error**

Dimensions were deleted in Phys. Inventory Journal when the field Qty. (Phys. Inventory) was validated.

### **This has been corrected**

Table 83 Item Journal Line

VSA reference: 8265278

**A264) Error Message " Assertion Failed:Inventory Profile"**

**Error**

The planning engine didn't allow to calculate transfers if the filter on Location was set.

**This has been corrected**

Codeunit 99000854 Inventory Profile Offsetting

**A265) Unit Cost Field Not Updated By Last Direct Cost**

**Error**

The field "Unit Cost" was not updated by "Last Direct Cost" although "Net Invoiced Quantity" was increased from zero.

**This has been corrected**

Codeunit 5804 ItemCostManagement

VSA reference: 8297029

**A266) New Non-Stock Item Created Twice**

**Error**

Creating a new item from a non-stock item and renaming it, would create a new item if the same non-stock item was used in a sales order.

**This has been corrected**

Codeunit 5703 Nonstock Item Management

VSA reference: 8191814

**A267) Expected Costs Are Not Reduced In Manufacturing**

**Error**

A wrong condition was applied before vital code was executed in Procedure CalcMfgAdjustedCost. Thus the adjustment did not reduce the expected cost.

**This has been corrected**

Codeunit 5895 Inventory Adjustment

VSA reference: 8337630

**A268) Reordering Policy Error**

**Error**

Calculating a regenerative plan and carrying out action messages would create an error if reordering policy was empty.

**This has been corrected**

Codeunit 99000813 Carry Out Action

VSA reference: 8314649

## **1.9 Warehouse Management**

### **Errors fixed**

#### **A269) "Cross-Dock Bin Code Field" Disabled**

##### **Error**

On location card, Bin tab, the field "Cross-Dock Bin Code Field" was disabled.

**This has been corrected**

Table 14 Location

#### **A270) Wrong UOM Calculation**

##### **Error**

When you had a put-away UOM that was different from the pick UOM, the calculation of the fields "Quantity Outstanding", "Quantity to Handle" and "Quantity Handled" in the put-away worksheet would be incorrect after creating the put-away, due to an invalid calculation of UOM's.

**This has been corrected**

Codeunit 7313 Create Put-away

VSA reference: 8172772

#### **A271) Available Quantity Not Calculated Correctly**

##### **Error**

When pick and reservation were used together, the reservation didn't calculate available quantity properly.

**This has been corrected**

Codeunit 99000845 Reservation Management

VSA reference: 8170365

## **A272) Put-away Decimal Error When Handling Multiple UOM**

### **Error**

Qty. (Base) of Whse. activity lines of type Put-away was calculated back and forth from Quantity during the Put-away Creation. This could cause rounding differences in Qty. Base, which let the balance quantity check fail during the registering of the Put-away.

### **This has been corrected**

Table 7302 Bin Content  
Codeunit 7313 Create Put-away"

VSA reference: 8139802

## **A273) Undo Shipment Not Possible**

### **Error**

The system did not allow an undo shipment if "purchase return order" (or sales order) had a value set in the Appl.-to Item Entry field.

### **This has been corrected**

Codeunit 22 Item Jnl.-Post Line

VSA reference: 8189489

## **A274) Bin Content Remains After A Put-Away Is Deleted**

### **Error**

The procedure delete Bin content was not called when a Put-away document was deleted. Therefore the bin content would remain after the document was deleted.

### **This has been corrected**

Table 5767 Warehouse Activity Line

VSA reference: 8225852

## **A275) Wrong Calculation In Pick Worksheet**

### **Error**

Pick Worksheet calculates an incorrect 'Qty. to Handle' and 'Available Qty. to Pick' value. The system deducts the Available Qty. to Pick twice; the first deduction is for the sales order and the second deduction is for the warehouse pick document.

### **This has been corrected**

Table 7326 Whse. Worksheet Line

VSA reference: 8248881

**A276) Error Message With Windows Logins Including More Than 20 Characters**

**Error**

When using a Windows Login containing more than 20 characters, an "Overflow under type conversion" error message was displayed when looking up on the [User ID] field of table 7301 [Warehouse Employee].

**This has been corrected**

Codeunit 418 Login Management

VSA reference: 8276381

**A277) Shipping Advice Ignored**

**Error**

When posting shipments in a transfer, whether through a warehouse shipment or not, the program did not check that a shipment was complete when the Shipping Advice field in the Transfer Header was set to Complete.

**This has been corrected**

Codeunit 5704 TransferOrder-Post Shipment

**A278) Pick Registered Without Sufficient Quantity To Pick**

**Error**

When registering picks of item-tracked items in locations without "Directed Put-away and Pick", the program did not perform a check to see that there was sufficient quantity for picking that was not either reserved or picked but not shipped.

**This has been corrected**

Codeunit 7307 Whse.-Activity-Register

**A279) Calculate Warehouse Adjustment Not Copying Expiration Date**

**Error**

"Report 7315 Calculate Warehouse Adjustment", creates item tracking lines for New Item Journal lines from procedures: "CreateReservEntryFor" and "CreateEntry" in "Codeunit 99000830 Create Reserv. Entry". These two procedures did not include the expiration date when creating item tracking lines.

Form 6855 EP Web Setup Caption List

### **A330) Misspelled String**

#### **Error**

"C6820-Q1019-P26171-A1033-L999>Delete Success" was misspelled.

#### **This has been corrected**

Codeunit 6820 EP Error Messages

### **A331) Source And Target Name Fields Are Too Small**

#### **Error**

Fields "Source" and "Target" in table 6829 was defined with length 30 even though they were assigned to field captions from "Field Table".

The captions are 80 chars long so the relevant fields on table 6829 have been expanded accordingly.

#### **This has been corrected**

Table 6829 EP WPR Field Lookup Mapping

### **A332) Name Field Too Small**

#### **Error**

The name field was defined with length 30 even though this field uses the field captions which are defined as 80 characters long.

The name field has been changed to 80 chars.

#### **This has been corrected**

Table 6807 EP WP Request Tab Field

### **A333) Web Part Time Out**

#### **Error**

When a BOM name included “)” in the name the web part would time out.

#### **This has been corrected**

Codeunit 6815 EP Support Functions

### **A334) Comparison Value Fields Are Not Mapped**

#### **Error**

When entering comparison values for decimals in Navision they were transformed into text format during XML communication to SharePoint.

#### **This has been corrected**

Codeunit 6815 EP Support Functions

### **A335) Card Web Part Error When Using Filters**

#### **Error**

Setting up a standard filter in “Card Web Part” would return an error message.

#### **This has been corrected**

Codeunit 6813 EP Decode XML

### **A336) Pictures Are Wrongly Scaled**

#### **Error**

In lists, every field configured to display an image would show the image scaled down to 10 percent, even when the value was changed in the configuration.

#### **This has been corrected**

Codeunit 6814 EP Encode XML

### **A337) Web Part Time Out**

#### **Error**

When creating a web part with a picture field without a scale ratio you would experience a web part time out when trying to load the web site.

#### **This has been corrected**

Codeunit 6817 EP Format Functions

### **A338) Allowance Of Wrong Web Part Request Codes On Table Actions**

#### **Error**

Users were allowed to select a web part that was not part of the current group. This has been solved and an error message is displayed.

#### **This has been corrected**

Table 6809 EP WP Request Table Action

### **A339) Web Part Request Table Can Link To It Self**

#### **Error**

Users were allowed to select the same web part as the one the table action was related to. This is not allowed any more and an error message is displayed.

#### **This has been corrected**

Codeunit 99008528 BizTalk Appln. Srv. Startup

## 2 Development Environment and Database Changes

### 2.1 Microsoft SQL Server Option

#### Errors fixed

##### P1) Transaction Log Has Unlimited MAX Size

###### Error

There was no restriction of file size for the transaction log. With Microsoft SQL Server 2005 it is recommended to have a MAX size.

Microsoft Business Solutions–Navision 4.0 now has max precision S32\_MAX = 2147483647.

###### This has been corrected

fin.exe  
nas.exe  
finsql.exe  
nassql.exe

KB reference: 911748

##### P2) Clustered Index Not Created On Primary Keys By Default

###### Error

Microsoft Business Solutions–Navision did not by default create a clustered primary key index.

###### This has been corrected

finsql.exe  
nassql.exe  
ndbcs.dll

KB reference: 911826

**P3) Not Possible To Open Salesperson Card When Being In A Print Dialogue**

**Error**

When opening a salesperson card in Microsoft Business Solutions-Navision 4.0 via the print dialogue, you could not focus on this card. Neither could you close the salesperson list because the card was opened. You would have to end the process.

**This has been corrected**

fin.exe  
finsql.exe

VSA reference: 8346156 & 8336496  
KB reference: 909929

**P4) It Was Not Possible To Open Database**

**Error**

It was not possible to open a Microsoft SQL Server database that was created in Microsoft Business Solutions - Navision 3.70 Service Pack B Update 1. You would receive the following error message:

207, "42S22", [Microsoft][ODBC SQL Server Driver][SQL Server]Invalid column name 'locktimeout'.

207, "42S22", [Microsoft][ODBC SQL Server Driver][SQL Server]Invalid column name 'locktimeoutperiod'.

207, "42S22", [Microsoft][ODBC SQL Server Driver][SQL Server]Invalid column name 'hardrowlock'.

207, "42S22", [Microsoft][ODBC SQL Server Driver][SQL Server]Invalid column name 'bufferedrows'.

**This has been corrected**

ndbcs.dll

KB reference: 911575

**P5) Desktop Links Can Not Open When Using Customer Licenses**

**Error**

With a customer license, Shortcuts to Desktop doesn't work properly. When you run the shortcut, it will open Navision, but not the actual form.

**This has been corrected**

fin.exe  
finsql.exe

VSA reference: 8219956  
KB reference: 908799

**P6) Internal Error: The Back Color Is Not Defined**

**Error**

When opening other applications at the same time as Navision is searching for data, you would sometimes receive the error message: "Internal error: The back color is not defined".

**This has been corrected**

fin.exe  
nas.exe  
finsql.exe  
nassql.exe

VSA reference: 8049570

KB reference: 908855

**P7) Dataport And Counting Records In Navision SQL Server Option**

**Error**

Dataport for table integer would run and would always be counting the records. Dataport should run on SQL Server in the same way as on the Native database.

**This has been corrected**

finsql.exe

VSA reference: 8301007

KB reference: 911819

**P8) CTRL + O Could Cause Crash On A Tablet PC**

**Error**

With certain combinations of opening a company with Ctrl+O while looking up / drilling down, Navision would close down with no error message, but a message was created in the application log with Event ID=1000 and offset=001a2d8c (4.0.0.20942; 41dc4918; finsql.exe; 4.0.0.20942; 41dc4918; 0; 001a2d8c).

**This has been corrected**

fin.exe  
finsql.exe

VSA reference: 8277580

KB reference: 911571

## 2.2 Development Environment

### Features

#### **P9) Navision Support Of .fdf File Format**

##### **Feature**

Navision now supports the .fdf file format for creating .pdf documents based on data in Navision.

##### **This feature has been implemented**

fin.stx

KB reference: 911574

### Errors fixed

#### **P10) Copy And Paste Of Objects Removes Objects**

##### **Error**

When copying and pasting W1 objects in Object Designer, all objects selected would be removed when using a partner development license for Microsoft Business Solutions–Navision.

The correction for this error will now check the license before pasting.

##### **This has been corrected**

#### **P11) Error When Changing The Language In Object Designer**

##### **Error**

An error was generated when switching language in Object Designer.

##### **This has been corrected**

#### **P12) Navision Crashes When Pressing “Down”**

##### **Error**

When opening the report designer and pressing the “Down” arrow would cause Navision to crash.

**This has been corrected**

**P13) Not Possible To See User Defined Field In Outlook Contacts**

**Error**

A User-Defined field could only be created and stored when the corresponding object was opened (active) in Outlook.

**This has been corrected**

**P14) Error 3 In Module 9**

**Error**

Designing an object and including a very long string would cause an error message "Error 3 in Module 9".

**This has been corrected**

**P15) Property Exceeds The Buffer Size**

**Error**

Designing a form with very long text constants in different languages, would give an overflow. Importing the language module would not return this error.

**This has been corrected**

**P16) Database Not Converted**

**Error**

Opening an older database with a Microsoft Business Solutions–Navision 4.0 SP1 client would result in a database conversion. In situations where you chose to do the conversion and then closed the client, you would experience that you needed to go through the conversion procedure once more.

**This has been corrected**

fin.exe  
nas.exe  
finsql.exe  
nassql.exe

VSA reference: 8364241  
KB reference: 911824

**P17) It Is Not Possible To Print On Other Paper Size Formats**

**Error**

It was only possible to print on A4 paper format with Navision. Now Navision will use the printer driver settings to identify possible print formats, A4 will only be the default when the printer driver does not return print size formats.

**This has been corrected**

KB reference: 911818

**P18) Link Table Property On XML Ports Did Not Create The Correct Link**

**Error**

The check for consistency between table number and table variable name for linked tables was performed incorrectly.

**This has been corrected**

fin.exe  
finsql.exe

VSA reference: 8357935  
KB reference: 911820

**P19) FindSet Does Not Have A Return Value If First Parameter Is "TRUE"**

**Error**

When you set the first parameter in a "FindSet" to "TRUE" and there is no record within your filter – you would get a runtime error regardless of you trying to handle the return value.

**This has been corrected**

fin.exe  
nas.exe  
cfront.dll

KB reference: 911655

**P20) Using Copy/Paste To Tables With Property "PastelsValid=No"**

**Error**

If you had a table with the property "PastelsValid=No" and you used the shortcut keys (Ctrl C and Ctrl V) to copy records, the records would be removed from where you were copying from.

**This has been corrected**

fin.exe  
fixsql.exe

VSA reference: 8137152  
KB reference: 911653

## **P21) Asserts Causing Client Crashes**

### **Error**

Asserts in the code caused the client to crash.

### **This has been corrected**

fin.exe  
finsql.exe

VSA reference: 7896308  
KB reference: 908854

## **P22) Navigation Pane Expands To Full Size**

### **Error**

After you restored the Microsoft Windows Terminal Server window, the navigation pane could be maximized. It might not be possible to resize the pane.

### **This has been corrected**

fin.exe  
finsql.exe

VSA reference: 8216753  
KB reference: 911752

## **P23) Navision Shuts Down When Pressing Arrow “Down”**

### **Error**

When you clicked the move-down arrow button to move a data item to a different position in a report that you were designing, Navision would crash.

### **This has been corrected**

fin.exe  
finsql.exe

VSA reference: 8168951  
KB reference: 911573

## **P24) COM Memory Leak In Debugger**

### **Error**

When working in the debugging environment, a memory leak could occur.

### **This has been corrected**

KB reference: 911753

## **2.3 Employee Portal Front End**

### **Errors fixed**

#### **P25) Decimal Fields In Result List Are Not Displayed Properly**

##### **Error**

Decimal fields in the search result list were not displayed as decimal values.

**This has been corrected**

#### **P26) Pictures In Lists Does Not Work**

##### **Error**

Setting up a list with a picture would give an error when navigating to the page and selecting a record including the picture.

**This has been corrected**

#### **P27) Wrong Date Conversion**

##### **Error**

The conversion of Time- and Date time-Values to valid xml-dates was done incorrectly.

**This has been corrected**

## **Issues**

## **2.4 Navision Application Server**

### **Errors fixed**

#### **P28) It Is Not Possible To Open A pdf File**

##### **Error**

When linking to a pdf file it was not possible to open the file from Navision.

**This has been corrected**

#### **P29) Convert Database Loops**

##### **Error**

When opening a database and converting it to the latest platform and closing Navision without opening the database would cause a database conversion again when opening the database the next time.

**This has been corrected**

#### **P30) Database Version Not Known In mdf File**

##### **Error**

When using a Microsoft Business Solutions–Navision 3.70.B Update 1 would give an error if the database was opened with a newer platform.

**This has been corrected**

#### **P31) Navision Application Server Can Not Run Adjust Cost Batch Job**

##### **Error**

When you tried to run the **Adjust Cost - Item Entries** batch job on a Navision Application Server (NAS) in Microsoft Business Solutions - Navision 4.0, the batch job did not run.

**This has been corrected**

nas.exe  
nassql.exe

VSA reference: 8082914  
KB reference: 908662

## **3 Installation**

### **3.1 Installation Program**

#### **Errors fixed**

#### **I1) “Detect And Repair” Error When Opening InfoPath**

##### **Error**

When installing Navision before Office you would get an error “Detect and Repair” when trying to open InfoPath.

**This has been corrected**

#### **I2) Demo Site Not Removed**

##### **Error**

Demo Site template was not removed when installing a new version of Employee Portal demo site.

**This has been corrected**

#### **I3) Navision Installation Rolls Back If Microsoft SQL Server Service Fails To Start**

##### **Error**

Installing Microsoft Business Solutions–Navision would be rolled back if Microsoft SQL Server service failed to start during the installation.

The “Ignore” button is now available during the installation dialogue.

**This has been corrected**

## **Issues**

### **I4) It Is Not Possible To Install On Same Computer**

#### **Issue**

The installation program installs a Navision version with the same GUID number and it is therefore not possible to run a Microsoft Business Solutions–Navision W1 4.0 SP2 installation if Microsoft Business Solutions–Navision W1 4.0 or Microsoft Business Solutions–Navision W1 4.0 SP1 is already installed on the computer.

Microsoft Business Solutions–Navision W1 4.0 SP2 installation will now give a warning when trying to install when Microsoft Business Solutions–Navision W1 4.0 is already installed. The warning will give the instruction to remove the previous installation before starting this installation.

VSA reference: 8331420

## **4 Tools**

### **4.1 C/Front**

#### **Errors fixed**

##### **T1) "HideError" Property Does Not Hide When Server Is Not Found**

###### **Error**

If the server was not found when calling the "ConnectServerandOpenDatabase" function, the C/Front object would show a message box reporting an error regardless of the "HideError" property.

###### **This has been corrected**

cfront.dll  
cfront.ocx

Clarify reference: SRQ050804601306  
KB reference: 912809

### **4.2 Smart Tag**

#### **Errors fixed**

##### **T2) Spelling Mistake**

###### **Error**

Opportunity was misspelled in profile.xml.

###### **This has been corrected**

Profile.xml

## Issues

### T3) File Removed From Installation

The file security.dll has been removed from the Smart Tag installation as it is no longer needed for the Smart Tag functionality.

## 4.3 N/ODBC

## Features

### T4) Set "FlowFilterMultiple"

#### Feature

It was not possible to make predicates that included parameter markers such as a '?' (question mark). With the new predicate "SetFlowFilterMultiple" it is now possible to make queries with dynamic parameters.

Example:

```
SELECT * FROM Currency Currency  
WHERE {pred SetFlowFilterMultiple, "Currency". "Customer_Filter", ? }
```

#### This feature has been implemented

nodbc.dll

VSA reference: 8205906

KB reference: 912814

### T5) NODBC Did Not Work With Linked Server In SQL Server 2005

#### Feature

NODBC now works with linked server in Microsoft SQL Server 2005.

#### This feature has been implemented

nodbc.dll

nodbcAlert.dll

KB reference: 911747

## **Errors fixed**

### **T6) Error When Running DTS Package**

#### **Error**

Running a DTS package that created tables with many records caused errors in process of copying data.

Error Message: "Need to run the object to perform this operation".

**This has been corrected**

### **T7) NODBC Inserts Fields As 250 Characters Long**

#### **Error**

"VARCHAR" fields were assigned length 250.

**This has been corrected**

### **T8) Filter Does Not Work**

#### **Error**

A filter on '999' would return records even when there were no records with code=999.

**This has been corrected**

### **T9) Wrong Result Of Sorting Criteria**

#### **Error**

Sorting criteria on numbers "1100...1400" would include "13000" numbers.

**This has been corrected**

### **T10) Internal Error 19-1262**

#### **Error**

When filtering on code before import to Excel would result in error message "Internal Error 19-1262" and make Excel crash.

**This has been corrected**

**T11) Blanks Not Returned By Query**

**Error**

When running a query to catch entries with a "BLANK" value, no records were returned.

**This has been corrected**

**T12) Filtering With "Filter Data" Returns More Records Than Wanted**

**Error**

When filtering on Document Type equals invoice, the query also returned credit memos.

**This has been corrected**

**T13) Dynamic Parameters Not Allowed**

**Error**

It was not possible to use a Parameter Marker "?" when specifying a Flowfilter. This would prevent runtime modifications of a query in MSQuery or other tools.

**T14) DTS Package Fails When Handling Big Tables**

**Error**

When running a DTS on 3 tables with many records in each, it would fail with these errors in the status list: "Catastrophic failure" & "Code execution exception: EXCEPTION\_ACCESS\_VIOLATION".

**This has been corrected**

nodbc.dll

VSA reference: 8187795

KB reference: 907538

**T15) Wrong Filtering On Option Fields**

**Error**

When filtering on document types and executing the query, more document types than wanted were included.

**This has been corrected**

nodbc.dll

cfront.dll

KB reference: 907539

#### **T16) "WHERE" Clause Ignores Blank Values**

##### **Error**

Creating a query with the "Where" clause resulted in BLANKS being excluded from the query result.

##### **This has been corrected**

nodbc.dll

KB reference: 907540

#### **T17) Internal Error 19-1262**

##### **Error**

When filtering on "Code" with a criteria "field length" > "code length" resulted in an error. "19-1262".

##### **This has been corrected**

nodbc.dll"

VSA reference: 8206874

KB reference: 907653

#### **T18) Wrong Sorting**

##### **Error**

Numeric values were sorted as alpha numeric text. A series of numbers based on an alpha numeric search was returned, when creating a query looking for a range of numbers.

##### **This has been corrected**

nodbc.dll

VSA reference: 8210579

KB reference: 907654

#### **T19) IIS Server Freezing When Accessing Via ASP**

##### **Error**

IIS froze when the ASP site was accessing the Navision Database with more than one user at the same time.

##### **This has been corrected**

nodbc.dll

VSA reference: 8310548  
KB reference: 912813

#### **T20) Fields Inserted As 250 Characters Long**

##### **Error**

"CHAR" fields were inserted as 250 characters long.

##### **This has been corrected**

nodbc.dll

VSA reference: 8279644  
KB reference: 898627

#### **T21) Disabled Fields Are Shown**

##### **Error**

Disabled fields were still shown as available.

##### **This has been corrected**

nodbc.dll

KB reference: 912794

#### **T22) No Warning When Fields Are Truncated**

##### **Error**

Entering a text with more than 30 characters resulted in a truncated field with 30 characters. It is no longer possible to add more characters than the field length in Navision.

##### **This has been corrected**

nodbc.dll

KB reference: 912792

#### **T23) Cannot Set Flow Filters On Joined Tables**

##### **Error**

It was not possible to add a flow filter when tables were joined.

##### **This has been corrected**

nodbc.dll

VSA reference: 8209188  
KB reference: 912793

#### **T24) Mail Merge Would Fail**

##### **Error**

Mail merge in Word failed in non-US versions of Navision.

##### **This has been corrected**

nodbc.dll

VSA reference: 8337704

KB reference: 911823

#### **T25) Microsoft Office Word 2003 Crash**

##### **Error**

Performing a complex query with many flow fields for a mail merge operation in Microsoft Office Word 2003 could cause Word to crash.

##### **This has been corrected**

nodbc.dll

KB reference: 912795

##### **This has been corrected**

## **4.4 ADCS**

### **Errors fixed**

#### **T26) Not Possible To Receive Goods With Two Scanners**

##### **Error**

The algorithm to assign ID's on the VT100 plug-in was incorrect. A new algorithm for the VT100 plug-in was created which should assign better ID's to the terminals. This only applies to Microsoft SQL Server Option and ADCS.

**This has been corrected**

## **4.5 Upgrade Toolkit**

### **Errors fixed**

#### **T27) Upgrade Tool Kit Deleted From Database Before Upgrade Was Complete**

##### **Error**

The Upgrade Tool Kit was deleted from the Navision database even though there were more companies to upgrade.

The Upgrade Tool Kit will now check the TimeLog Table for records in each company before removal.

##### **This has been corrected**

Codeunit 104004 Delete Upgrade Toolkit

VSA reference: 8252735

#### **T28) Error In Function "PostedDocDim.SETRANGE("Document No","No.")"**

##### **Error**

When upgrading Sales Shipment Lines, Sales Invoice Lines, Sales Cr. Memo Lines, Purch. Rcpt. Lines, Purch. Inv. Lines and Cr. Memo Lines an error was generated.

##### **This has been corrected**

Codeunit: 104052 - Upgrade 4.00 Step 2 Dimension

VSA reference: 8299926

#### **T29) Upgrade From Navision 3.60 Leads To Number Series Error**

##### **Error**

Not posted shipments were not possible to post after an upgrade from Navision 3.60 to Navision 4.0 SP1.

##### **This has been corrected**

Codeunit 104048 Upgrade 4.00 Step 2

**T30) Pay-to Vendor No. Is Not Upgraded (Navision 3.10 To Navision 4.00)**

**Error**

The "Pay-to Vendor No." was not set on the purchase receipt line during upgrade.

**This has been corrected**

Codeunit 104048 Upgrade 4.00 Step 2

**T31) "Output Completely Invd. Date" Not Filled For Partly Invoiced Sales**

**Error**

"Output Completely Invd. Date" was not filled when upgrading from Navision Financials 2.60 even though positive Item Ledger Entries were closed.

**This has been corrected**

Codeunit 104049 Upgrade 4.00 Step 2

VSA reference: 8167764

**T32) Value Entries Doubled**

**Error**

Value entries were doubled when lot numbers and partial purchase invoice posting was used in 3.01.

**This has been corrected**

Codeunit 104049 Upgrade 4.00 Step 2  
Codeunit 104050 Item Trkg. Upgrade Step 1
