

TradePoint.net Professional Edition

E-commerce for Dynamics NAV

ScriptServer TradePoint.net is a powerful and highly acclaimed web based solution for MS Dynamics NAV. TradePoint.net provides customers and internal staff access to a professional set of B2B and B2C features such as purchase products, view statements, view invoices, customer interaction and much more. The TradePoint.net web site can quickly be configured as a public e-commerce web shop, a B2B self service portal and/or an employee portal.

Experience a revolutionary concept for e-commerce

TradePoint.net meets the needs for B2B, B2C, consulting bureaus as well as out of office sales personnel that need to access their business system. The real time integration with Dynamics NAV ensures that your data is up to date and your business logic is retained. With TradePoint.net you can capitalize on investment already made in customizations and configurations in Dynamics NAV.

TradePoint.net handles all e-commerce functionality while the business critical data and calculations are performed in Dynamics NAV. Any object in Dynamics NAV can be presented in the e-commerce solution, together with extended information, whether it is product descriptions, images, PDF-documents, flash movies or any kind of new media.

TradePoint.net is fully compatible with Microsoft applications and technologies such as ASP.NET, Web Parts, Web Services and so on. Furthermore, TradePoint.net can be used either with it's extensive out of the box functionality, or customized according to your clients preferences.

TradePoint.net also offers a comprehensive security model, both for the e-commerce solution as well as the communication with Dynamics NAV. This model enforces a high level of security – *right people only get access to right information.*

ISV/Software Solutions
Custom Development Solutions

"The business system is the central nerve of the organization."

Features

True Dynamics NAV integration

TradePoint.net features an online connection, executing business logic inside the ERP system to achieve a true integration which re-uses existing calculations and discount rules and all other enhancements already done.

Order history, account balance, order statistics

Customers and internal staff can quickly access pending orders, order history, account balance and order statistics to get an exact financial view.

Web Shop

TradePoint.net is also a full blown, state of the art web shop offering all the features you expect such as a rich product catalogue, credit card payment gateway integrations, related products, and more.

ERP to Web

The ScriptServer platform together with the connectivity of TradePoint.net is a great starting point for further development. Build your web enabled ERP solutions on TradePoint.net for a rapid development cycle.

Multiple language, tax and currency support

The multi language support of the ScriptServer platform together with the true ERP integration of TradePoint.net provides a global solution for your business. TradePoint.net is also available in several languages.

Customer interaction

Open up for new levels of communication with you customers. TradePoint.net enables your customers with file areas, discussion forums and private messages.

Techniques and technology

TradePoint.net offers support for many powerful techniques of application development.

- **Real time ERP integration**
Integrates real time through Navision Application Server (NAS), XML through Message Queues.
- **Supports both online and offline communication**
TradePoint.net can also consume and communicate using replicated data.
- **Built in security model**
Authentication and permission handling on all application levels.
- **Full support for Microsoft.NET**
Supports all .NET techniques, ASP.NET, ADO.NET, SOAP, Web Services, Web Controls, Web Parts, AJAX and more..
- **Based on Microsoft Server technology**
MS IIS and MS SQL Server
- **Microsoft Dynamics NAV**
Real time integration to MS Dynamics NAV 2.6 and later versions.
- **3 types of competencies**
Microsoft Dynamics NAV: C/SIDE. Web Development: Microsoft.NET, Graphical design: Style Sheets (CSS).
- **Cost effective solution**
No replication avoids reimplementing of business logic. Lots of built in features. Configurable site behaviour and customer experience. Fully customizable.
- **Flexible and scalable e-commerce in many shapes**
Service B2C customers in a ready to use web shop, invite B2B customers to a secure self service.
- **Full security**
Digital certificates, IP blocking, SSL, NT challenge/response.
- **And more...**
Built in Content Management Platform, Localization, User- and Security Management, Customization through configuration and programming.
